Evening Brief

Date: Friday September 7th, 2018

Weather Summary

*** Stronger Wind Gusts Saturday for Idaho/Nevada ***

Drier air works into the Great Basin from west to east with only a few isolated thunderstorms briefly Saturday over eastern Idaho/Wyoming/eastern Utah ahead of a stronger area of low pressure, however the winds will be a more significant result of the cold front moving through.

SW to W increase further Saturday and will be more widespread across southern ID/WY, northern and western Nevada with gusts 30-35 mph and RH dropping to 8-15%. Wind gusts may exceed 40 mph at times over southern/eastern Idaho. Due to current fire activity, **High Risk** has been issued for gusty winds/low RH Saturday (see map).

Dry air will remain in place into next week with stronger cold fronts moving through the Great Basin bringing much cooler temperatures and stronger winds. At this point **High Risk** has been issued for Mon/Tue for some areas due to gusty winds/low RH. While breezy winds are expected much of next week, the day with the strongest winds at this time looks to be Wednesday. However, due to forecast model inconsistencies, the windiest day may change. **Temperatures will cool 15-20 degrees by the middle of next week, especially over the northern half of the Great Basin.**

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	4	Light Initial Attack Activity
National	3	GB New Fires and Acres: 19 fires 95 acres; 2,441 acres large fire growth

Great Basin Fuel Status [interactive link](#) (Use Edge, Chrome or Firefox browsers)

Fuels and Fire Behavior advisory has been issued for [Northern Great Basin](#)

Fuels/Fire Potential

Fuels have been steadily drying the past week with ERCs back in the 80th - 90th percentile in many areas of Idaho, northern Nevada and northern Utah. Heavier 1000-hr fuels are still well below normal in many of these areas and near record lows for the time of year in some locations. ERC's are below the 50th percentile across most of the southern third of Nevada, and Utah, into the AZ Strip.

Sagebrush Live Fuel Moisture levels across the northern half of the Great Basin are near or just below early September normals, and grasses are cured in all areas.

Fuels will likely gradually modify next week due to cooler temperatures, however stronger winds are also expected.

Resources

Aviation within the Great Basin

- 1 VLAT's, 6 LATs, 2 CL-415's
- 21 SEATs, 2 Fire Bosses
- 12 Type 1 Helicopters / 10 Committed
- 14 Type 2 Helicopters / 13 Committed
- 21 Type 3 Helicopters

Crews Committed within the Great Basin

- 10 IHCs Committed / 4 Available
- 22 T-2 IAs Committed / 0 Available
